

## Purple Passionfruit

*Passiflora edulis*

Height: 15 feet

Spread: 30 inches

Sunlight:

Hardiness Zone: (annual)

Other Names: Passion Fruit, Passion Flower

### Description:

One of the more spectacular vines for the garden; the large flowers are showy and distinctive, and the dark purple fruits are edible and attractive; wonderful for covering an arbor, trellis or lattice, the flowers are individually beautiful close up

### Ornamental Features

Purple Passionfruit features showy lightly-scented crimson star-shaped flowers with purple overtones and white eyes at the ends of the branches in mid summer. The flowers are excellent for cutting. It features an abundance of magnificent purple berries in late summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up. Its compound leaves remain dark green in color throughout the season.

### Landscape Attributes

Purple Passionfruit is a multi-stemmed annual with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting birds, bees and butterflies to your yard. It has no significant negative characteristics.

Purple Passionfruit is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Purple Passionfruit will grow to be about 15 feet tall at maturity, with a spread of 30 inches. As a climbing vine, it should either be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is not originally from North America.
