

Aurora Hinoki Falsecypress
Chamaecyparis obtusa 'Aurora'

Height: 8 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 4b

Description:

A compact dwarf variety featuring twisted sprays of yellow-green foliage that add appreciable color and texture to the shrub border or garden; very robust and hardy

Ornamental Features

Aurora Hinoki Falsecypress has attractive chartreuse foliage which emerges yellow in spring. The twisted scale-like leaves are highly ornamental and remain chartreuse throughout the winter. Neither the flowers nor the fruit are ornamentally significant. The shaggy indian red bark adds an interesting dimension to the landscape.

Landscape Attributes

Aurora Hinoki Falsecypress is a multi-stemmed evergreen shrub with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Aurora Hinoki Falsecypress is recommended for the following landscape applications;

- Accent
- General Garden Use

Planting & Growing

Aurora Hinoki Falsecypress will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 70 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
